

5 **System and Method for Scheduling an Event over a Network**

Abstract

 A method for scheduling an event over a network in a calendar of an
invitee includes creating a schedule request that includes at least a set of details
10 of the event and an identifier of the event creator. The schedule request is sent to
a server in communication with the network. The server has access to the
calendar of the invitee and a calendar for the event creator. Upon receipt of the
schedule request, an event record is created at the server that includes at least the
set of details for the event and a link to the invitee's calendar. The event is also
15 added to the calendar of the invitee. The schedule request may be created using
a link associated with the event.
